## OASlcs – OpenAccess Series in Informatics

OASlcs aims at a suitable publication venue to publish peer-reviewed collections of papers emerging from a scientific event. OASlcs volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

## ■ Contents

Software Structure and WCET Predictability <i>Gernot Gebhard, Christoph Cullmann, and Reinhold Heckmann</i> .....	1
Towards a Time-predictable Dual-Issue Microprocessor: The Patmos Approach <i>Martin Schoeberl, Pascal Schleuniger, Wolfgang Puffitsch, Florian Brandner, Christian W. Probst, Sven Karlsson, and Tommy Thorn</i> .....	11
A Template for Predictability Definitions with Supporting Evidence <i>Daniel Grund, Jan Reineke, and Reinhard Wilhelm</i> .....	22
An Overview of Approaches Towards the Timing Analysability of Parallel Architectures <i>Christine Rochange</i> .....	32
Towards the Implementation and Evaluation of Semi-Partitioned Multi-Core Scheduling <i>Yi Zhang, Nan Guan, and Wang Yi</i> .....	42
An Automated Flow to Map Throughput Constrained Applications to a MPSoC <i>Roel Jordans, Firew Siyoum, Sander Stuijk, Akash Kumar, and Henk Corporaal</i> ..	47
Towards Formally Verified Optimizing Compilation in Flight Control Software <i>Ricardo Bedin França, Denis Favre-Felix, Xavier Leroy, Marc Pantel, and Jean Souyris</i> .....	59

## ■ Preface

We are happy to present the proceedings of the 2011 Workshop on Predictability and Performance in Embedded Systems, held in March 2011 in Grenoble, France, as a satellite event of the Conference on Design, Automation & Test in Europe (DATE).

The PPES workshop is concerned with critical hard real-time systems that have to satisfy both efficiency and predictability requirements. For example, an electronic controller for a safety-critical system in an automobile needs to react not only correctly to external inputs such as rapid deceleration or loss of grip, but also provably within a given time-span. This topic of *reconciling predictability and performance* has received much interest in recent years, in particular considering its growing relevance and complexity with the advent of multi-core systems with shared resources.

The advancements in these fields, however, have been discussed mostly in the standard venues (general conferences, workshops, journals). The aim of this workshop is twofold:

- to present the results achieved and tools developed by various researchers, in particular to industrial end users;
- and to present the industrial viewpoint on needs and challenges which need to be tackled for applicability.

To this end, the workshop comprises an invited presentation by Ottmar Bender of Cassidian Electronics on *Predictability and Performance Requirements in Avionics Systems*, a panel discussion on *Predictability and Performance in Industrial Practice*, and a number of paper presentations. In this first instance of the workshop, we received 14 submissions. After a careful review, 7 submissions covering various aspects of predictability and performance have been selected to appear in these proceedings. We would like to thank all authors for submitting their work to this first instance of the workshop despite the tight deadlines.

PPES was supported by

- *ArtistDesign*, the European Network of Excellence on Embedded Systems Design
- the *PREDATOR* project (Design for Predictability and Efficiency)
- the *MERASA* project (Multi-Core Execution of Hard Real-Time Applications Supporting Analysability)

The workshop is organised by: Philipp Lucas (Universität des Saarlandes), Lothar Thiele (ETH Zürich), Benoît Triquet (Airbus), Theo Ungerer (Augsburg University) and Reinhard Wilhelm (Universität des Saarlandes; chair). We were supported in the Program Committee by Pascal Sainrat (University of Toulouse), Sami Yehia (Thales), Wang Yi (Uppsala University) and Rafael Zalman (Infineon). Additional reviews were provided by David Black-Schaffer, Unmesh Dutta Bordoloi, Christian Bradatsch, Giorgio Buttazzo, Mamoun Filali, Mike Gerdes, Claire Maiza, Jörg Mische, Eric Noulard, Christine Rochange and Sascha Uhrig. Our thanks also go to Nicola Nicolici, the workshop chair of DATE, and to Bashir M. Al-Hashimi, general chair of DATE, for making this event possible.
