LIPICS – Leibniz International Proceedings in Informatics

LIPICS is a series of high-quality conference proceedings across all fields in informatics. LIPICS volumes are published according to the principle of Open Access, i.e., they are available online and free of charge.

■ Foreword

The Symposium on Theoretical Aspects of Computer Science (STACS) is an international forum for original and unpublished research on theoretical aspects of computer science. Typical areas are (cited from the call for papers for this year's conference):

- algorithms and data structures, including: parallel, distributed, approximation, and randomized algorithms, computational geometry, cryptography, algorithmic learning theory, analysis of algorithms;
- automata and formal languages, games;
- computational complexity, randomness in computation;
- logic in computer science, including: semantics, specification and verification, rewriting and deduction;
- current challenges, for example: natural computing, quantum computing, mobile and net computing.

STACS has taken place each year since 1984, alternately in Germany and France. The conference in Kiel from February 27 through March 2, 2013, is the 30th in this series: Paris (1984), Saarbrücken (1985), Orsay (1986), Passau (1987), Bordeaux (1988), Paderborn (1989), Rouen (1990), Hamburg (1991), Cachan (1992), Würzburg (1993), Caen (1994), München (1995), Grenoble (1996), Lübeck (1997), Paris (1998), Trier (1999), Lille (2000), Dresden (2001), Antibes (2002), Berlin (2003), Montpellier (2004), Stuttgart (2005), Marseille (2006), Aachen (2007), Bordeaux (2008), Freiburg (2009), Nancy (2010), Dortmund (2011), Paris (2012), and Kiel (2013).

The interest in STACS has remained at a high level over the past years; STACS 2013 received 254 submissions from 41 countries. (Authors were asked to submit an extended abstract of at most 12 pages; missing proofs had to be put into an appendix.) In the selection process, 54 submissions were selected for presentation and publication, which implies an acceptance rate of about 21%. The selection of the contributions was carried out in a two-phase process in autumn 2012: over a period of eight weeks, every paper was reviewed by three members of the program committee, who, at their discretion, involved external reviewers; over a period of four weeks, intensive discussions within the program committee, structured in five rounds, led to the selection of the papers published in this volume. The overall very high quality of the submissions made the selection a difficult task.

As co-chairs of the program committee, we would like to sincerely thank our colleagues for having submitted to STACS such a great number of excellent papers, our co-members of the program committee (see list on page vii) and the many external reviewers (see list on page ix) for their valuable work in assessing the merits of each individual submission. We would like to express our thanks to the three invited speakers, Kousha Etessami, Kurt Mehlhorn, and Stéphan Thomassé, and to Dániel Marx, the invited tutorial speaker. Special thanks go to Andrei Voronkov for providing EasyChair, the software used for processing and screening submissions to the conference.

We would like to warmly thank Henning Schnoor and Björn Kinscher for preparing these conference proceedings, and Michael Wagner and Marc Herbstritt from the Dagstuhl/LIPIcs team for assisting us in the publication process and the final production of the proceedings.

These proceedings contain extended abstracts of the accepted contributions and abstracts of the invited talks and the tutorial. The authors have retained their rights and make their work available under a Creative Commons license. The proceedings are published electronically by Schloss Dagstuhl – Leibniz-Center for Informatics within their LIPIcs series;

they are accessible through several portals, in particular, DROPS and HAL. Both, DROPS and HAL, guarantee perennial and easy electronic access as well as indexing in DBLP and Google Scholar.

Lyon and Kiel, February 2013

Invited Talks

The complexity of analyzing infinite-state Markov chains, Markov decision processes, and stochastic games <i>Kousha Etessami</i>	1
Graph coloring, communication complexity, and the stubborn problem <i>Nicolas Bousquet, Aurélie Lagoutte, and Stéphan Thomassé</i>	3
Physarum Computations <i>Kurt Mehlhorn</i>	5

Tutorial

Algorithmic Graph Structure Theory <i>Dániel Marx</i>	7
--	---

Session 1A: Parametrized Complexity

Searching for better fill-in <i>Fedor V. Fomin and Yngve Villanger</i>	8
Probably Optimal Graph Motifs <i>Andreas Björklund, Petteri Kaski, and Łukasz Kowalik</i>	20
Tight bounds for Parameterized Complexity of Cluster Editing <i>Fedor V. Fomin, Stefan Kratsch, Marcin Pilipczuk, Michał Pilipczuk, and Yngve Villanger</i>	32

Session 1B: Complexity and Logic

Bounded-width QBF is PSPACE-complete <i>Albert Atserias and Sergi Oliva</i>	44
Model Counting for CNF Formulas of Bounded Modular Treewidth <i>Daniel Paulusma, Friedrich Slivovsky, and Stefan Szeider</i>	55
Backdoors to q-Horn <i>Serge Gaspers, Sebastian Ordyniak, M. S. Ramanujan, Saket Saurabh, and Stefan Szeider</i>	67

30th Internatioanl Symposium on Theoretical Aspects of Computer Science (STACS'13).

Editors: Natacha Portier and Thomas Wilke

Leibniz International Proceedings in Informatics
Schloss Dagstuhl – Leibniz-Zentrum für Informatik, Dagstuhl Publishing, Germany

Session 2A: Kernels

On Polynomial Kernels for Sparse Integer Linear Programs <i>Stefan Kratsch</i>	80
Linear kernels for (connected) dominating set on graphs with excluded topological subgraphs <i>Fedor V. Fomin, Daniel Lokshtanov, Saket Saurabh, and Dimitrios M. Thilikos</i> ..	92

Session 2B: Complexity and the Reals

The PCP theorem for NP over the reals <i>Martijn Baartse and Klaus Meer</i>	104
Mutual Dimension <i>Adam Case and Jack H. Lutz</i>	116

Session 3A: Constraint Satisfaction

Exact and Approximation Algorithms for the Maximum Constraint Satisfaction Problem over the Point Algebra <i>Yoichi Iwata and Yuichi Yoshida</i>	127
Local Search is Better than Random Assignment for Bounded Occurrence Ordering k -CSPs <i>Konstantin Makarychev</i>	139
The complexity of approximating conservative counting CSPs <i>Xi Chen, Martin Dyer, Leslie Ann Goldberg, Mark Jerrum, Pinyan Lu, Colin McQuillan, and David Richerby</i>	148

Session 3B: Cryptography, Biology, Learning

Lossy Chains and Fractional Secret Sharing <i>Yuval Ishai, Eyal Kushilevitz, and Omer Strulovich</i>	160
Two Hands Are Better Than One (up to constant factors): Self-Assembly In The 2HAM vs. aTAM <i>Sarah Cannon, Erik D. Demaine, Martin L. Demaine, Sarah Eisenstat, Matthew J. Patitz, Robert T. Schweller, Scott M. Summers, and Andrew Winslow</i>	172
Unlabeled Data Does Provably Help <i>Malte Darnstädt, Hans Ulrich Simon, and Balázs Szörényi</i>	185

Session 4A: Graph Algorithms and Theory

Computing cutwidth and pathwidth of semi-complete digraphs via degree orderings <i>Michał Pilipczuk</i>	197
On Pairwise Spanners <i>Marek Cygan, Fabrizio Grandoni, and Telikepalli Kavitha</i>	209

Excluded vertex-minors for graphs of linear rank-width at most k <i>Jisu Jeong, O-joung Kwon, and Sang-il Oum</i>	221
--	-----

Session 4B: Words

Recompression: a simple and powerful technique for word equations <i>Artur Jeż</i>	233
Fast Algorithms for Abelian Periods in Words and Greatest Common Divisor Queries <i>Tomasz Kociumaka, Jakub Radoszewski, and Wojciech Rytter</i>	245
Finding Pseudo-repetitions <i>Paweł Gawrychowski, Florin Manea, Robert Mercaş, Dirk Nowotka, and Cătălin Tiseanu</i>	257

Session 5A: Computational Geometry

Algorithms for Designing Pop-Up Cards <i>Zachary Abel, Erik D. Demaine, Martin L. Demaine, Sarah Eisenstat, Anna Lubiw, André Schulz, Diane L. Souvaine, Giovanni Viglietta, and Andrew Winslow</i>	269
Space-Time Trade-offs for Stack-Based Algorithms <i>Luis Barba, Matias Korman, Stefan Langerman, Rodrigo I. Silveira, and Kunihiko Sadakane</i>	281
L_1 Shortest Path Queries among Polygonal Obstacles in the Plane <i>Danny Z. Chen and Haitao Wang</i>	293

Session 5B: Two-Variable Logics

Quantifier Alternation in Two-Variable First-Order Logic with Successor Is Decidable <i>Manfred Kufleitner and Alexander Lauser</i>	305
FO^2 with one transitive relation is decidable <i>Wiesław Szwast and Lidia Tendera</i>	317
Two-variable first order logic with modular predicates over words <i>Luc Dartois and Charles Paperman</i>	329

Session 6A: Parametrized Algorithms

Abusing the Tutte Matrix: An Algebraic Instance Compression for the K-set-cycle Problem <i>Magnus Wahlström</i>	341
Subexponential-Time Parameterized Algorithm for Steiner Tree on Planar Graphs <i>Marcin Pilipczuk, Michał Pilipczuk, Piotr Sankowski, and Erik Jan van Leeuwen</i> ..	353

Session 6B: Complexity

The arithmetic complexity of tensor contractions <i>Florent Capelli, Arnaud Durand, and Stefan Mengel</i>	365
Search versus Decision for Election Manipulation Problems <i>Edith Hemaspaandra, Lane A. Hemaspaandra, and Curtis Menton</i>	377

Session 7A: Matching

Improved Bounds for Online Preemptive Matching <i>Leah Epstein, Asaf Levin, Danny Segev, and Oren Weimann</i>	389
Parameterized Matching in the Streaming Model <i>Markus Jalsenius, Benny Porat, and Benjamin Sach</i>	400
Popular Matchings: Structure and Cheating Strategies <i>Meghana Nasre</i>	412

Session 7B: Quantum Computing

Fooling One-Sided Quantum Protocols <i>Hartmut Klauck and Ronald de Wolf</i>	424
Explicit relation between all lower bound techniques for quantum query complexity <i>Loïck Magnin and Jérémie Roland</i>	434
Optimal quantum query bounds for almost all Boolean functions <i>Andris Ambainis, Arturs Backurs, Juris Smotrovs, and Ronald de Wolf</i>	446

Session 8A: Algorithms for Concrete Problems

Streaming Complexity of Checking Priority Queues <i>Nathanaël François and Frédéric Magniez</i>	454
Deterministic algorithms for skewed matrix products <i>Konstantin Kutzkov</i>	466
The Simulated Greedy Algorithm for Several Submodular Matroid Secretary Problems <i>Tengyu Ma, Bo Tang, and Yajun Wang</i>	478

Session 8B: (Un-)decidability

Hardness of Conjugacy, Embedding and Factorization of multidimensional Subshifts of Finite Type <i>Emmanuel Jeandel and Pascal Vanier</i>	490
The finiteness of a group generated by a 2-letter invertible-reversible Mealy automaton is decidable <i>Ines Klimann</i>	502

Mortality of Iterated Piecewise Affine Functions over the Integers: Decidability and Complexity <i>Amir M. Ben-Amram</i>	514
---	-----

Session 9A: Algorithms and Algorithm Analysis

On the practically interesting instances of MAXCUT <i>Yonatan Bilu, Amit Daniely, Nati Linial, and Michael Saks</i>	526
First Fit bin packing: A tight analysis <i>György Dósa and Jiří Sgall</i>	538
Constrained Binary Identification Problem <i>Amin Karbasi and Morteza Zadimoghaddam</i>	550

Session 9B: Automata and Languages

Regular languages of thin trees <i>Mikołaj Bojańczyk, Tomasz Idziastek, and Michał Skrzypczak</i>	562
Approximate comparison of distance automata <i>Thomas Colcombet and Laure Daviaud</i>	574
The Rank of Tree-Automatic Linear Orderings <i>Martin Huschenbett</i>	586

Session 10A: Algorithms and Information Theory

A general framework for the realistic analysis of sorting and searching algorithms. Application to some popular algorithms <i>Julien Clément, Thu Hien Nguyen Thi, and Brigitte Vallée</i>	598
Search using queries on indistinguishable items <i>Mark Braverman and Gal Oshri</i>	610

Session 10B: Lower Bounds

Pebbling, Entropy and Branching Program Size Lower Bounds <i>Balagopal Komarath and Jayalal Sarma M N</i>	622
Advice Lower Bounds for the Dense Model Theorem <i>Thomas Watson</i>	634
Index of Authors	646
